

Advantages and disadvantages of tower solar power generation system

Overview

The Solar Power Tower is a large-scale solar thermal power system that uses mirrors to direct and concentrate sunlight into the tower-designed structure. Its early form uses a water-filled boiler to generate steam on top of it. The steam then flows into a turbine (a giant fan) connected to an electrical generator. As the. A Solar Power Tower consists of a large circular parabolic trough with a receiver at the focal point. The mirrors focus the Sun's energy onto this receiver, heating heat-transfer fluid (molten salt) and generating high-temperature heat. The Solar Power Tower system is free of greenhouse gas emissions, air pollution, and noise. Although the Solar Power Tower itself creates no waste, its production can emit certain gasses such as carbon dioxide (CO₂). Although Solar Power Towers are only beginning to be popularized, it is a promising technology that can help solve problems with.
