

Can we use solar energy to generate electricity if we have electricity

Overview

Human ingenuity has developed two different ways how to harvest the energy of the sun and turn it into electricity: Solar thermal systems and solar photovoltaic systems. A solar thermal system generates electricity indirectly by capturing the heat of the sun to produce steam, which runs a turbine that produces electricity. A solar photovoltaic system generates electricity directly by capturing the energy of collected sunlight and transforming it directly into electricity thanks to the photovoltaic effect. In short, this effect takes place when solar power is not just a technology of the future—it's a solution for today. By harnessing the sun's energy through solar thermal systems or photovoltaic panels, we have the ability to generate clean, sustainable electricity that. Solar power is one of the most attractive renewable energy options for homeowners. With costs falling by 85% since 2010, installing solar panels at home is now more affordable.
