

How to match the battery pack with the charger cable

Overview

Cycle life can be negatively impacted when batteries from different manufacturers are charged in the same manner. Even the same types of batteries, such as Li-Ion and NiMH, may require separate charging considerations. Inspection of the manufacturer's data sheet revealed that some types of NiMH batteries can take a. Insufficient run time is caused by undercharging the battery, which can happen by misapplying technology. For example, charging of a 4.2. By ensuring proper Li-Ion and NiCd battery charging, your result is improved time-to-market, reduced development costs, and a finely tuned battery and charger system. Avoiding all of these overarching concerns. The "one stop shop" approach to custom battery packs and chargers is extremely beneficial to the person purchasing the batteries and chargers. If the battery pack and charger are ordered.
