

Solar Charging Station Field Risks

Overview

Significant investment by the UK Government (via the 'Charging Infrastructure Investment Fund'), and by public authorities and private organisations, has resulted in new electric vehicle charging facilities becoming a prominent feature in a wide range of premises from multi-storey car parks, to national parks and. There are a number of factors that should be considered prior to and following the installation of electric vehicle charging units at your premises to. A residual current device (RCD), should be provided to automatically separate the charging station from the electrical power supply in case of a ground. In addition to the location of charging/parking areas, and the provision of automatic fire detection and suppression, there are a wide range of general operational. Installation of photovoltaic (PV) solar systems as part of an integrated EV charging system across surface and multi-storey car parks is becoming increasingly common, however the installation of PV panel arrays introduces.
