

Solar panel tracking system price

Overview

Let's be honest – it's simple and convenient to set your solar panels in a fixed position, then leave them there. If you're living in the UK, panels should ideally be a) south-facing, b) tilted at about a 30-40° angle, and c) completely unobstructed by shade. If you've got this right, you're already nailing solar power. How much freedom do you want your solar panels to have?

If you're thinking of buying a solar tracker, you'll need to choose between two different types: single-axis or dual-axis. As the name would suggest, a single. The cost of single-axis solar tracking is £0.85 (or \$1.08) per watt. Based on this estimate, here is how much it would cost to mount a typical solar PV system on a single-axis tracker, ranging from a 1 kilowatt-peak (kWp) to a. Unless you own a large, commercial-scale array of solar panels, it's probably not worth buying a solar tracker. In real terms, a 35% output gain is hugely significant when it's applied to a 100kWp system, but not so much when it.
