

What equipment do I need to install solar power at home

Overview

A roof-mounted solar panel system absorbs and converts the energy-packed photons of natural sunlight into a usable energy form. Solar panel systems are often referred to as PV, or photovoltaic, solar power systems. The home installation of a high-quality solar power system can reduce or eliminate dependence on the utility. Understanding the components of a solar power system is the first step to finding the right system for you. The components of a grid-tied home solar power system include: 1. Solar panels 2. You can install solar panels yourself if you're looking to save money on installation costs. Many people who decide to go the DIY route use solar panel kits that cost anywhere from \$7,000 to \$15,000 to cover all of. Proper installation can be as critical to future performance and return on your investment as the quality of the equipment. Extensive training and a complete understanding of.
