

What to do if the battery is running out of power

Overview

You have a couple of recharging solutions to consider should your electric car run out of battery: If it is not possible to recharge at a nearby charging station then you can use a portable charger or call for a breakdown cover provider who will charge the EV with a partial charge or tow you to a charging station. Here's a. So, power is starting to run out or you've come to a complete stop, let's look at your options: 1. Find a nearby charging station Yep – captain obvious. The most common-sense answer is. Most EVs provide real-time information about the battery's state of charge, so it's really easy for drivers to see how low the battery is getting. Here are. Try to keep calm, this is stressful but panicking can make the situation worse. As soon as you notice your battery is running critically low or the car starts to lose power you should pull over safely onto the hard shoulder or. An electric car could potentially travel for around 10-40 miles on a low battery before running out of power (estimated for a battery of around 10%).
